

Public Garden GIS Interns

GIS interns work with the professional staff of the garden to survey locations of plants, amenities, hardscape, and utilities of the garden. Interns learn ArcGIS software, how to identify both common and unusual plants by botanical name, collect location information using professional GPS, and document botanical information using Windows Mobile-based handheld devices and iPads. The internship provides an excellent opportunity for students to gain botanical, horticultural, and technical (GIS, GPS, and Database) knowledge that can be applied in numerous fields of employment.

Prerequisite: Introductory course in GIS

Schedule: Two quarter minimum internship commitment. Interns commit to 3-9 hours/week.

Starts in winter quarter.

Units: 1-3
